MEDIFLO LLC · BEDROCK ESG · AETHEXER · SPEXTER · ECHO-EX

# The Human Bible

Plain-Language Guide to the SPEXTER Ecosystem

What we built. Why it matters. How it works for you — in language anyone can understand and every institution can trust.

V1 · PRODUCTION · PLACEHOLDERS RESOLVED · BEDROCKESG.COM · ECHO-EX.COM · CONFIDENTIAL — EVALUATION COPY

SECTION 1

## The Problem

Every day, across millions of buildings, factories, data centers, server rooms, mining facilities, and rooftops, **energy disappears into thin air**. Heat bleeds off surfaces. Power is consumed cooling machines that could cool themselves. Carbon emissions rack up in supply chains nobody has actually measured. And at the end of it all, companies file reports full of estimates, proxies, and guesswork — paying for credits that trace back to nothing real.

Nobody is lying. The tools to do better simply did not exist — until now.

> **The Gap:** There is no end-to-end system that physically measures energy waste at the surface level, verifies it forensically from satellite to ground, locks that proof on a blockchain, and converts it into liquid, tradeable value — automatically, for anyone. That is what we built.

SECTION 2

## The Solution in Everyday Language

**COOL IT · SPOT IT · PROVE IT · MONETIZE IT**

Four synchronized systems working as one continuous value chain. Each one does a specific job. Together they create something the world has never had: **autonomous, physics-grounded, blockchain-anchored environmental value — delivered to anyone who needs it.**

---

SYSTEM ONE

# Aethexer Sovereign Skin

### "The World's First Self-Cooling, Self-Reporting Physical Intelligence Layer"

Aethexer is not a coating. It is not just a roof treatment. **It is a living system** — a deployable metamaterial intelligence skin that bonds to virtually any heat-bearing surface on Earth and immediately begins doing two things at once: **cooling the structure it covers** and **reporting verified proof to the blockchain**.

Whatever form it arrives in — rigid panel, flexible film, spray-applied coating, or precision-cut wrap — **it does the cooling job.**

#### Where Aethexer Deploys

- → Data center server racks, chassis walls, and cooling floors
- → Cryptocurrency mining rigs and high-density compute arrays
- → Industrial HVAC chillers, condensers, and mechanical units
- → Aerospace housings, airframe panels, and ground support equipment
- → Skyscraper facades, casino envelopes, and commercial building walls
- → Window wraps, solar glazing films, and curtain wall systems
- → Rooftops of any structure — residential, commercial, or industrial
- → Any machinery, enclosure, or surface generating or absorbing unwanted heat

#### The Two Thermodynamic Breakthroughs — Zero Electricity. Zero Moving Parts. Zero Operational Cost.

**Solar Radiation Rejection:** Reflects up to 96%+ of incident solar energy away from the surface before it ever enters the structure.

**Deep-Space Heat Venting:** Emits internal thermal load directly through the atmosphere's natural 8–13 µm transparency window into the sub-zero sink of deep space — chilling surfaces **5–10°C below ambient air temperature** and delivering verified electrical demand reduction of **20–30% during peak cooling hours** (ASHRAE 90.1 envelope modeling).

#### The Hash-Match State Packet — Aethexer's Autonomous Reporting Engine

The moment Aethexer is applied, it activates. Embedded sensor arrays begin continuous thermal differential measurement, kinetic frequency monitoring, and physics-to-data conversion. Every verified measurement is cryptographically state-hashed and transmitted as

a **secure Hash-Match packet** — a tamper-proof, blockchain-anchored record of every BTU saved, every watt of demand reduced, every degree of thermal load eliminated.

No manual reporting. No estimates. No proxies. **Physics becomes proof. Automatically.**

**WHAT IT MEANS FOR YOU**

You don't need a famous building. You don't need a landmark skyscraper or a nationally recognized facility. If it exists and generates heat — it qualifies. The value is already there, hidden inside your existing machinery, server rooms, rooftop, and walls.

Aethexer unlocks that value autonomously from day one. It cuts your electrical demand during peak pricing hours. It extends machine lifecycles. It converts raw physical cooling into permanent, provable, blockchain-anchored yield.

**We bring it to you now — and autonomously from now on. You deserve it.**

---

SYSTEM TWO

## SPEXTER — The Orbital-to-Ground Discovery Engine

### "We Find Wasted Energy the Way a Detective Works a Case — Starting From Space, Moving to Ground Truth."

Before anyone can unlock value from a facility, that value needs to be found and precisely measured. SPEXTER is the system that does exactly that — scanning the globe to locate, quantify, and verify unmonetized energy waste and material efficiency opportunities before anyone else sees them.

| STAGE | SENSING MODALITY | OPERATIONAL ACTION | CERTAINTY LEVEL |
|---|---|---|---|
| **Stage 1 — From Orbit** Remote Discovery | Satellite Multispectral & Thermal Infrared Imaging | Scans geographic sectors for Energy Ghost Plumes — heat signatures and thermal bleed leaking into the atmosphere undetected by ground observers | **~60% Baseline Confidence** Diagnostic Lead |
| **Stage 2 — On the Ground** Specialist Attestation | Calibrated Probes, Thermal Sensors & Spatial PLY Scans | A Level 5 certified forensic operator captures on-site ground truth — exact BTU/kWh savings verified against satellite data, certified for blockchain settlement | **~95%+ Certified Precision** Settlement-Grade |

Stage 2 is required for settlement execution. Discovery leads from Stage 1 are converted to certified, monetizable assets only after on-site forensic attestation.

CANONICAL NON-ENCROACHMENT PLEDGE

SPEXTER is a **diagnostic discovery oracle** — not a land grab. When our satellites resolve thermal waste signatures over any facility, data center, casino floor, private property, or household rooftop, that reading is a **diagnostic opportunity for that owner** — never a claim of title, equity, or ownership stake in their asset.

It does not have to be a famous building. It does not have to be a famous house. If it exists, **the value is already there.** We measure for the betterment of the company, the environment, and the household. We measure. **We do not possess.**

SYSTEM THREE

# Bedrock ESG & Bedrock Flow

### "The Forensic Ledger & Value Engine — Where Physics Becomes Permanently Locked Value"

Bedrock is where physical measurements — thermal differentials, BTU savings, supply-chain material flows — become cryptographically locked assets on the blockchain. Nothing enters the Bedrock ledger without passing the **Sentinel Gate Triad**.

**The Sentinel Gate Triad — Triple Verification Before Any Value Is Created**

| | | |
|---|---|---|
| **Document Integrity Gate** | **95%** | All supporting documentation must pass forensic integrity verification before processing |
| **LLM Confidence Gate** | **75%** | AI-driven data interpretation must meet minimum confidence threshold |
| **Spatial Correlation Gate** | **75%** | On-site sensor data must correlate with satellite thermal data |
| **Composite Integrity Floor** | **≥ 72%** | Weighted composite score floor — any submission below is rejected for reprocessing |

**Multi-Material Scope 3 Ledger**

Bedrock quantifies and monetizes physical waste across **9 top-level categories and 24 physical commodity tracks** — including structural materials, precious metals, polymers,

electronics, organics, textiles, and fiat settlement channels — anchored to ASHRAE 90.1 and EPA eGRID baselines.

**3-Year Retroactive Window:** Up to 36 months of historical waste and supply-chain manifests quantified and monetized. Your past efficiency gains have value you haven't claimed yet.

**Dynamic BPS Settlement — The Integrity Floor That Never Moves**

All value routes on Solana Token-2022. The settlement engine operates at a mathematically enforced integrity floor:

| SETTLEMENT LEG | BASIS POINTS (BPS) | PURPOSE |
|---|---|---|
| Asset Sovereign | **7,000 BPS** | Returned to the verified asset holder — the entity whose property generated the savings |
| Verification Node | **2,000 BPS** | Compensates the forensic verification network and oracle infrastructure |
| Public Resilience Pool | **1,000 BPS** | Funds ecosystem sustainability, public access, and environmental reinvestment |
| **Σ Total (Immutable Floor)** | **10,000 BPS** | **Code-enforced runtime assertion — cannot be overridden or bypassed** |

Note: The default seed above reflects operator reference distribution. The live allocation is dynamically operator-configured at runtime and consumed by the settlement gate. Σ = 10,000 BPS is the immutable code-enforced floor under all conditions.

SYSTEM FOUR

# Echo-Ex — The Accessible, Fraud-Proof Carbon & RWA Marketplace

### "Real Value. Real People. Zero Guesswork."

Echo-Ex is the institutional and consumer storefront — the place where verified physical savings become liquid, tradeable instruments, and where **anyone** can participate in the new carbon economy.

Designed for everyone: Fortune 500 sustainability officers, commercial property operators, small businesses, everyday households — **renters and owners alike, from age 16 to 70.**

**What Makes Echo-Ex Different**

→ **100% Provable & Fraud-Proof:** Every carbon instrument and RWA token traces back through a deterministic SHA-256 Hash Match to a physical, sensor-metered Bedrock ledger entry —

anchored on Hedera HCS and Polygon ERC-1155. The chain of custody is unbroken from physics to token.

- **Zero Guesswork. Zero Paper Offsets:** No phantom credits. No synthetic brokers. No speculative paper certs. Every gram of carbon and every watt saved is verified from physical origin to final settlement.
- **Code-Enforced Fair Access:** Hard 2-tier maximum referral boundary (MLM guard) — code-enforced, not policy-enforced. Authentic participation and real value distribution, always.
- **Undisputable Processing:** Everything goes through extensive, multi-layer forensic processing and approval under our Genius Act 2026 framework. Not promising impact — proving it. Impact you can actually stand behind.

**No mystery paper. No guesswork. No speculation.**

Just provable, physics-grounded, blockchain-anchored impact — verified from the surface of a building to the ledger of a blockchain. Every step measured. Every result locked. Every credit real.

**This is the new standard. This is Echo-Ex.**

SECTION 3

## The Ecosystem — One Chain of Trust

These four systems do not operate in isolation. They are a single, continuous value chain where each system feeds the next:

- **Aethexer** applies to the surface → begins cooling → transmits Hash-Match telemetry packets autonomously
- **SPEXTER** discovers waste from orbit → attestation team verifies on the ground → Sentinel Gate locks the measurement
- **Bedrock ESG** receives verified data → processes through triple-gate forensic ledger → converts physics into cryptographically locked assets
- **Echo-Ex** lists those assets as liquid instruments → individuals and institutions buy, hold, or retire verified carbon credits and RWAs

> **The result:** A fully autonomous, end-to-end system that discovers value, measures it with forensic precision, locks it immutably on-chain, and delivers it to anyone who needs it — with zero human intervention required after activation.

SECTION 4

## Who This Is For

The SPEXTER ecosystem was engineered to serve everyone across the value chain of environmental accountability:

- **Fortune 500 Corporations & Enterprise Operators:** Satisfy ISSB IFRS S2, SEC climate disclosure, and EU CSRD requirements with forensically verified, audit-ready data — not estimates
- **Commercial Real Estate & Property Owners:** Unlock retroactive value from existing facilities. Your building already has untapped efficiency gains — we measure and monetize them
- **Data Centers & Mining Operations:** Reduce electrical demand, extend hardware lifecycles, and generate verifiable carbon assets from operational improvements
- **Industrial & Manufacturing Facilities:** Scope 3 supply-chain transparency with 24-category physical commodity tracking — retroactive up to 36 months
- **Households, Renters & Individuals (Ages 16–70):** Participate in the verified carbon marketplace through Echo-Ex. You do not need to own property or be a corporation to have a real environmental footprint — and real impact
- **Institutional Investors & ESG Funds:** Access a class of verifiable, physics-grounded RWAs anchored to real-world energy measurements — not modeled proxies

SECTION 5

## Our Commitment — We Measure. We Do Not Possess.

MEDIFLO LLC, operating as Bedrock ESG and the SPEXTER ecosystem, is a **diagnostic telemetry oracle**. This is not a legal technicality — it is the foundation of how we operate.

- We never claim ownership, equity, or value in any third-party property, asset, or infrastructure
- Scanning, telemetry, or thermal discovery over any facility represents a diagnostic reading — never a lien, claim, or encumbrance on that property
- All measurement data generated from a client's facility is the property of that client, verified and anchored on their behalf
- We exist to measure for the betterment of the company, the environment, and the household

THE MEDIFLO CANONICAL PLEDGE

"We never claim to own, value, or take a stake in anyone else's property. We measure for the betterment of the company, the environment, and households. The value is

already there — in your building, your machinery, your rooftop, your facility. We bring it to you now, and autonomously from now on. **You deserve it.**"
